

Problem

"Gaps" in telemetry recordings are a risk factor for patient identification errors and have led to near misses and adverse events in our hospital.

Goal

Completely eliminate wrongful telemetry data display by the end of the academic year.

Pre-Intervention

We will send out a survey to assess and quantify the degree of telemetry mix ups that have lead to incorrect clinical assessments, near misses, or patient harm.

Intervention

1. **Promote awareness** with the "mind the gap" slogan
2. **Work with safety leadership** to eliminate wrongful telemetry data display.

Post-Intervention

We will repeat the survey after changes are made, to assess outcomes.
